We report experimental results from three Colombian villages concerning the impact of a voting mechanism on interpersonal trust and trustworthiness. The vote is purely consultative in that participants are asked to declare in a secret ballot the most "appropriate" plan of action for individuals involved in a "Trust Game". The plan of action that is most voted is then publicly announced.

The US has exceptionally high inequality of disposable household income. Among working-age households (those with no persons over age 60), that high level of inequality is caused by a high level of market income inequality (i.e., income before taxes and transfers), paired with a moderate level of redistribution. In this paper, we look more deeply at market income inequality, focusing on its ...
