Tumors and Tumor-like Conditions There are many types of tumors that affect the temporal bone, including intra-cranial tumors of the cerebellopontine angle that involve the 7th and 8th cranial nerves and internal auditory canal (IAC). Temporal bone imaging for tumors is typically evaluated based on the patient's presenting clinical symptom.

Tumors and Tumor-like Conditions

Each chapter begins with a brief overview of “common” tumors and tumor-like conditions and with a section on the classification of both common and rare entities. The main clinical, pathological, immunohistochemical, and molecular findings for each rare tumor or tumor-like condition are then described and discussed.

Article - Bone tumors and tumor-like conditions of bone

*Metastatic bone tumors are much more prevalent than primary bone tumors

*Almost any kind of malignant tumor may metastasize to bone, but the most common originate from five organs: breast, kidney, lung, prostate, and thyroid.

Radiographic Analysis of Tumors and Tumor-Like Conditions ...

Introduction. Conditions affecting the adrenals are commonly identified at cross-sectional imaging in the adult patient population. Sometimes these lesions are clinically suspected, but more often they are incidentalomas (ie, adrenal masses discovered during diagnostic testing for another condition), which represent tumors or tumor-like conditions that a radiologist will initially assess ...
